

Six Sigma eChampion® Training

BMG's eChampion® training prepares Champions for their leadership role in the Six Sigma deployment process

Champions pave the way for Six Sigma success within an organization. They are key leaders who act as change agents by selecting and defining projects, mentoring Black Belts, and ensuring Six Sigma is aligned with the organization's strategic goals. Meaningful Six Sigma change can only come about if your Champions are properly prepared to guide and support practitioners. Knowing how to fill the project pipeline with viable projects, and then driving these projects to produce ongoing results, is the primary role of Champions and business leaders. Prepare your leaders for Six Sigma success with BMG's exclusive eChampion® program.

Ideal for busy business leaders who are unable to devote hours of time to classroom training, eChampion is an effective and engaging alternative. eChampion provides the same depth of training you would expect to receive in the classroom, but allows you to study at your own time and pace.

Course Description

BMG's eChampion course is recommended for preparing Champions for their leadership role in the Six Sigma deployment process. This course is designed to give participants a detailed introduction to the principles of Six Sigma, as well as thorough training on selecting and driving a project from start to finish. eChampion also makes great pre-work for classroom training, allowing instructors to spend more time on project identification and prioritization. Our eCourses were developed using Macromedia Flash™ to offer flexible, highly interactive training.

Agenda

eChampion consists of 12 online modules - each approximately one hour long. The first six modules provide a comprehensive overview of Six Sigma, the DMAIC methodology and key organizational roles. These topics are designed to provide the Champion with a broad understanding of how Six Sigma will work in their organization and what their role will be. The next six modules provide detailed instructions on the techniques and tools Champions require to properly identify, prioritize, define, scope and hand-off Six Sigma projects. Participants also have the opportunity to test their knowledge by taking quizzes.

AT A GLANCE

Course Length:

12 Hours and 30 Minutes of interactive material.

Who Should Attend:

Executives, Process Owners, Champions, Business Leaders and Master Black Belts responsible for selecting and driving Six Sigma projects within the organization.
