World-class Performance Excellence programs require a world-class deployment management solution

Organizations around the world use PowerProjX as an end-to-end, online solution for managing and tracking the success of their Performance Excellence programs. PowerProjX is a comprehensive reporting and management system that allows companies to easily manage their entire program portfolio, including past, present and proposed project details and financial benefits. PowerProjX features customizable real-time reporting options, and easy administration that does not require extensive technical expertise. Plus, PowerProjX is fully configurable to support your organization's specific Performance Excellence roadmap.

PowerProjX Features Overview

Portfolio Management— PowerProjX enables you to capture ideas from across the enterprise, and use standardized criteria to prioritize them. Get instant visibility to the entire project pipeline, from ideas to completed projects. Dashboards help you track progress and spot exceptions.

Project Management— PowerProjX enhances project productivity with standardized roadmaps. Supports a variety of Performance Excellence methodologies including Six Sigma, DFSS, Lean, Kaizen, Lean Six Sigma, Workout, Just-Do-It, BPM and more. Project roadmaps can be configured according to your specifications, including tools and templates associated with specific deliverables. Role-based electronic approvals ensure compliance. Project metrics such as such as project ranking, risk scoring and process improvement measures are consistently tracked.

AT A GLANCE

What is PowerProjX?

PowerProjX is an enterprise-wide, web-based solution for tracking Performance Excellence projects.

Who should use PowerProjX?

Any organization that wants to increase the efficacy of its Performance Excellence programs, better track financial results and streamline project management.

How is PowerProjX delivered?

ProjX is a web-based tool accessible with a login from any computer with an internet connection.

Who benefits from PowerProjX?

Every member of the Performance Excellence team: Executives, Champions, Master Black Belts, Black Belts, Green Belts, Lean Facilitators, Finance Reps, Process Owners, IT Project Managers, etc.

Financial Benefits Management— PowerProjX features a robust enterprise-wide financial tracking system. Best practice templates culled from real-world experience enable your organization to collect key financial data for every project. Advanced features include multiple views (forecast, actual, etc.) and allocation across business units, programs, or other hierarchical structures. Finance representatives can audit, update and lock data across an entire project portfolio.

Real-time Reporting— PowerProjX end-users can quickly generate standard reports. Over 30 report wizards. Report designers can create customized reports including charts and graphics. Supports on-demand or scheduled batch reporting; web or email delivery; and output to HTML, PDF, RTF and Excel. Reporting API allows you to create reports using your existing BI/reporting tool.

Knowledge Management— Capture related project information with PowerProjX's robust document manager. Includes check-in/check-out workflow and version control. Leverages institutional knowledge with a best practices library, automatic retrieval of similar projects, and robust search functionality.

- ❑ Easy administration with little or no IT support required

PowerProjX

Communications Management— PowerProjX helps your project teams stay current. Includes email reminders, on-line alerts, system-wide announcements and electronic status reports, as well as quick and easy PowerPoint generation.

Administration Console— Easily manage users and groups. Customized permissions and roles. Ability to integrate with other enterprise systems using web services, and authentication options including LDAP and SSO.

Optional PowerProjX Features

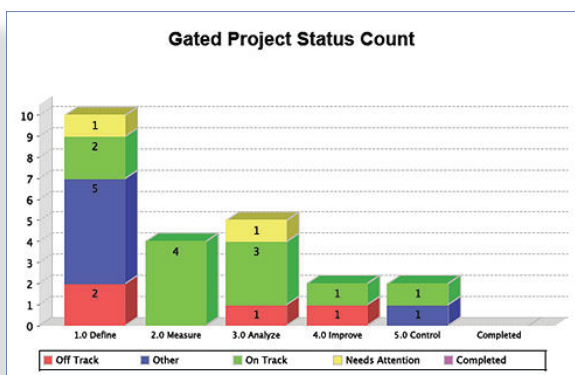

Resources and Scheduling— PowerProjX offers an interactive Gantt Chart and automatic scheduling to help companies manage resources, dependencies and constraints.

Issues and Risks— PowerProjX can help you identify, prioritize and track issues and risks. Includes task ownership and tracking, and roll-up views of open items.

Time and Expense— PowerProjX can track project spending for both labor time and purchased items. Data is automatically integrated with overall financials and metrics.

Integrated eLearning Modules— PowerProjX offers integration with BMG's extensive library of online eLearning courses to provide just-in-time training lectures, resources, templates and examples in a project-based context.

Program Policy Alignment— A secure link to your organization's Process Excellence intraweb (or your eHandbook from BMG) to encourage compliance with enterprise-wide standards, policies and procedures.

FOUR REASONS WHY PowerProjX FROM BMG* is the right solution for your Performance Excellence program

1. Along with PowerProjX, BMG provides a **complete solution** for deployment management. As a **global leader** in Performance Excellence problem-solving, we leverage our master consultants and trainers worldwide to provide timely, real-world expertise.
2. BMG's experienced, dedicated team provides one of the **quickest turnaround times** in the industry from demo to go-live. Plus, our configuration process is run by Black Belts who **understand what it takes** to successfully manage a Performance Excellence program.
3. BMG's **suite of technology solutions** includes our comprehensive library of web-based eCourses, our online eHandbook pre-populated with best practice policies and procedures, and our Six Sigma Wizard online learning portal. These products can be integrated into PowerProjX to give users a **one-stop resource** for Performance Excellence.
4. BMG offers **worldwide training**, including scheduled onsite classes and web-based teleconferences, to get end users up-to-speed **quickly and efficiently**. We practice train-the-trainer, and we'll support your expert users to help them take on future training.
